

CLIMATE POLICY

SERVAIR IS COMMITTED TO THE CLIMATE

DEFINITION OF CLIMATE STRATEGY AND LOW CARBON TARGETS

Servair's climate policy marks its commitment to achieving global carbon neutrality by 2050, in order to comply with the Paris agreements and contain the global temperature increase to +1.5°C.

Our ESG and QE4S (Quality, Environment, Food Safety, Health and Safety at work, Ramp Safety, Standardization) developed for many years already integrate environmental and carbon issues and reflect the ambition defined by our parent company gategroup. Greenhouse gas (GHG) emissions from our operations (scope 1 and scope 2) in Paris have already fallen by more than 25% between 2009 and 2022.

We are continuing our efforts, with a goal of reducing them by 80% in 2030 (scope 1 and 2) compared to the 2009 level. This ambition is valid both in Paris, where more than 80% of our activity is concentrated, and in our other locations.

Between 2009 and 2030, our actions for scope 1 and 2 focus on the most important levers:

Reduce the energy consumption of our facilities by 40%:

- Optimize our building footprint
- Use less consuming equipment (boiler, chillers, washing machines, lighting)
- Apply the energy sobriety plan
- Monitor our consumption (measuring equipment, energy performance contracts, eco-gestures...)

Develop energy recovery and reduce our industrial process emissions by 50%:

- Substitute the use of dry ice (eutectic plates and dock refrigeration)
- Renew the cold unit fleet and and refrigerants

Decarbonize by 70% the emissions related to our consumption of fossil fuels:

- Greening of the fleet of commercial and light vehicles
- Use of biofuels for the fleet of heavy goods vehicles and track gear
- Suppression of thermal boilers
- Produce renewable energy

Our ambition will also integrate scope 3 in 2024, and in particular our commitments on sustainable catering, waste management, the circular economy and employee mobility.

Together, let's take up this challenge, which is essential for our business, our customers, our planet and take action to combat climate change.
